Instruments development and testing for the Solar Orbiter mission

Tuesday, 8 June 2021 13:30 (45 minutes)

The Solar Orbiter Spacecraft carries a unique combination of 10 scientific instruments towards the innermost regions of the Solar System. This talk presents the Solar Orbiter spacecraft and its intended trip around the Sun. It will then focus on the main engineering challenges that had to be addressed during the development cycle, integration and testing of the instruments.

Presenter: Ms PACROS, Anne (ESA)

Session Classification: ESA
