

John White Symposium

Contribution ID: 18

Type: not specified

Scattering, Self-Assembly and Scientific Sojourning

Friday, July 19, 2024 8:30 AM (30 minutes)

In March 1994, not long after starting my PhD, John White, my then supervisor, asked me “do you have a passport”? On 27th May I was off to ISIS for an experiment on LOQ and then on CRISP! This was the start of a series of neutron scattering experiments during my PhD but much more broadly an introduction to a network of interesting scientists, top level facilities and exciting science that continues to influence my work. I will discuss some of the still ongoing work on micelle templating that was started during my PhD and some of the advances and new directions we have charted since then.
